main.js Output

```javascript
const expenses = [];

function addExpense(name, amount) {
    const expense = {
        name: name,
        amount: amount
    };
    expenses.push(expense);
    console.log("Expense Added:", expense);
}

function showExpenses() {
    console.log("\nExpense List:");
    expenses.forEach((exp, index) => {
        console.log(index + 1 + ". " + exp.name + " - ₹" + exp.amount);
    });
}

function totalExpense() {
    let total = 0;
    expenses.forEach(exp => {
        total += exp.amount;
    });
    console.log("\nTotal Expense: ₹" + total);
}

// Example usage
addExpense("Food", 200);
addExpense("Travel", 100);
addExpense("Shopping", 500);

```

Run
